CrystalCable®

INFINITE Dream

For over two decades, Crystal Cable has pursued a single vision: to bring music closer to life.

The sold-out limited edition Infinity Power Cable was one such moment in our journey — celebrated, awarded, and cherished by listeners and reviewers around the world. Infinity became a symbol of what was possible when innovation and artistry meet.

Dreams never end, they expand and evolve. At Crystal Cable, we never stop dreaming.

Infinite Dream is the realization of that continuing pursuit. A complete flagship series of Power, Interconnect, and Speaker cables, created without compromise. Every connector is designed in-house to provide the ultimate musical connection and artistic elegance of the cables. It is a series where everything comes together, created for those who believe music should feel, limitless, alive, like a never-ending dream.

A series where infinity becomes reality, and reality becomes art.

Power Cable

Every performance begins with power. The Infinite Dream Power Cable provides the foundation upon which music takes form — stable, silent, and alive with potential.

With its nine superconductors, each formed from a combination of solid Infinite **Crystal Silver** and **Silver-Gold²** wires in an optimized topology, the current it delivers is pure, limitless, and unwavering. This architecture minimizes electrical resistance and electromagnetic interference, ensuring that nothing stands between your system and the music it was built to reproduce.

From the first note, it delivers blacker backgrounds, effortless current, and dynamic headroom that gives

instruments their natural space and energy. Silence becomes more silent, allowing every sound to emerge with startling clarity — from the delicate shimmer of a cymbal to the full weight of an orchestra.

But Infinite Dream goes beyond specifications. Its true achievement is in the way it allows music to breathe, expand, and flow without limit. The listener experiences power not as electricity, but as emotion — the quiet strength that supports every note, every crescendo, every pause.

This is power delivery elevated to art: invisible yet indispensable, revealing what lies hidden in recordings and turning playback into performance.

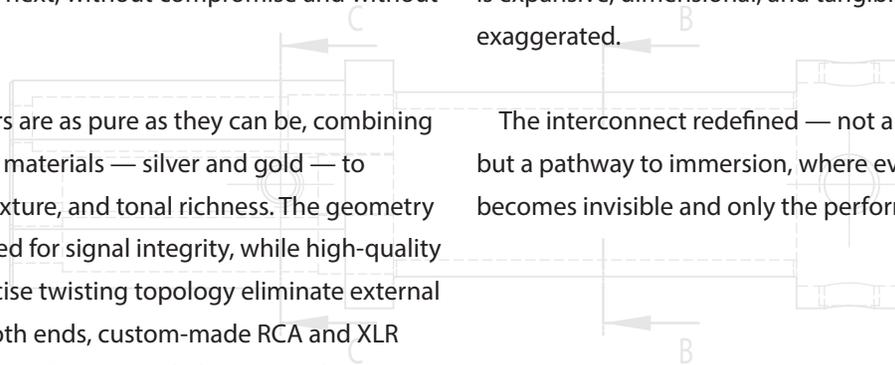

Interconnect Cable

Between source and amplifier, between imagination and reality — this is where the Interconnect stands. It is the vital bridge that carries the essence of music from one component to the next, without compromise and without loss.

Its six conductors are as pure as they can be, combining the most precious materials — silver and gold — to enhance clarity, texture, and tonal richness. The geometry is carefully designed for signal integrity, while high-quality shielding and precise twisting topology eliminate external interference. At both ends, custom-made RCA and XLR connectors ensure perfect transmission, every time.

The Infinite Dream Interconnect reveals music in its most fragile and fleeting forms. It is not only about carrying signal, but about preserving emotion. The soundscape is expansive, dimensional, and tangible, yet never exaggerated.

The interconnect redefined — not a link in the chain, but a pathway to immersion, where every connection becomes invisible and only the performance remains.

Speaker Cable

The final connection. The moment where power and signal become music.

Eight superconductors, woven into a topology that naturally cancels electromagnetic interference, allow the signal to flow to your loudspeakers with unmatched smoothness, speed, and stability. This unique architecture combines **Infinite Crystal Silver** and **Silver-Gold²** conductors, terminated in custom-made Silver-Gold² spades, ensuring the most secure and transparent connection possible.

The Infinite Dream Speaker Cable delivers music with unrestrained authority and breathtaking refinement. It unlocks boundless dynamics yet maintains delicate

control, allowing both explosive crescendos and subtle textures to unfold with effortless ease.

Every note carries weight, every silence holds meaning. The scale of a symphony orchestra, the intimacy of a single instrument, the presence of a voice — all are revealed with striking realism and dimensionality.

This is not simply a cable, but the final translation of energy into art. With Infinite Dream Speaker Cables, systems achieve a performance that is as expansive as it is intimate — powerful yet nuanced, vast yet profoundly personal.

It is the dream completed: music in its most vivid, nending form.

Features

- **Purity of design:** Advanced conductor technology and insulation deliver ultra-low distortion and preserve music with absolute clarity.
- **Compact elegance:** Flexible construction integrates seamlessly into any system while maintaining a refined and luxurious appearance.
- **Positive aging:** Materials and connectors are engineered to improve with use, ensuring natural performance that lasts for decades.
- **Custom connectors:** Specially developed for Infinite Dream, they ensure perfect contact, durability, and signal integrity.
- **Refined craftsmanship:** Hand-built in the Netherlands, each cable combines precision engineering with artisanal attention to detail.

<u>Superconductor</u>					
Core	Infinite Crystal Silver				
Insulators	Kapton PTFE				
Stranded conductors	Infinite Crystal Silver & Silver Gold ²				
Sleeve	Transparent teflon				
<u>Supercoax</u>					
Core	Infinite Crystal Silver
