

Sonus faber CRESCENDO™ technology provides the user with a dramatically **bigger soundstage** from a small package. OMNIA's 7 loudspeakers and advanced digital signal processing allow our Artisans of Sound to craft a large, open, and enveloping sound.

By cleverly mixing stereo signals, adjusting delays, and modifying the phase behavior of the loudspeakers we are able to craft a wider sound scape, where **bipole and dipole theory** are used together to create that **immersive effect** that makes the OMNIA sound like a much bigger stereo sound system.

CRESCENDO™ activates the side firing full-range drivers, supporting the front mid-high drivers.
