FOR MORE THAN 40 YEARS WE HAVE DESIGNED, DEVELOPED AND HANDCRAFTED OUR LOUDSPEAKERS IN DENMARK

In 1979, Ole Klifoth founded Audiovector with a desire to make the perfect loudspeaker for the global high-end market. The vision of the company is still, to produce high quality and natural sounding loudspeakers for music lovers and audiophiles around the world.

Mads Klifoth, son of Ole and CEO has a great desire to honour this unique DNA and tradition.

Audiovector products are handcrafted from the finest materials and hand assembled with great detail and care. Every loudspeaker is designed, developed and produced in-house to exceptional standards.

AUDIOVECTOR IS A FAMILY OWNED COMPANY BASED IN COPENHAGEN, DENMARK

R 8 ARRETÉ

SETTING THE STANDARD IN ITS FIELD - THE R 8 ARRETÉ IS A TRUE HIGH-END PERFORMER

The new Audiovector Carbon Driver has been engineered to improve our already class leading drivers: Lighter, stiffer and sound dead membranes to produce a fast and uncolored sound. The membranes of new Titanium Tech drivers are made from precision woven aramid fibers, sandwiched with artificial wood resin.

A delicate balance combining our award-winning 8+6,5" downfiring isobaric compound bass system with a new midrange topology and a 4-inch rear firing bass/midrange driver. Seamlessly integrated with the new Audiovector quasi rear firing R-AMT Integrator tweeter.

The use of cryogenically treated 7-nines pure copper asymmetrical wiring and Audiovector Nanopore damping material gives a smooth and natural musical reproduction.

The Freedom® Grounding system, invented and engineered by Audiovector, is a complex distortion eliminating construction. The effect of Freedom® Grounding brings about improved overtones, lower noise floor, increased image depth with tighter focus and wider soundstage. You will also find that pace, dynamics and musical expression have surpassed existing standards.

R 6

A POWERFUL AND SOPHISTICATED LOUDSPEAKER FOR THE DEMANDING MUSIC LOVER

The R 6 Series is dynamic, delicate, emotionally revealing and natural sounding with great attention to detail. A rock steady and easy driven speaker that brings together impressive performance with luxury and refinement.

The Isobaric Downfiring Bass Reflex System contains of an internal 6,5" driver working parallel with a bottom mounted 8" driver. You can expect a tight, controlled and very powerful experience.

Audiovector Freedom® Grounding is a new and revolutionary grounding technology, which addresses the movement induced distortion of and between the drive units in a loudspeaker.

To further improve realism and 3D performance, the new R 6 Arreté now uses a rear firing 3" midrange driver with its own dedicated crossover. The technology using a rear firing driver, is inspired by our reference R 11 Arreté and R 8 Arreté. The construction also adds a perfectly dosed level of midrange

R 3

THE PERFECTLY BALANCED SPEAKER FOR MUSIC LOVERS

The R 3 Series is a compact speaker line based on a mixture of evolution and new inventions. All that we believe a pair of floor standing speakers should ever deliver, the R 3 does to perfection. As for partner acceptance factor, the R 3 series ranks high.

Patented Audiovector designed in-house drivers made in Denmark. Hand crafted Audiovector Air Motion Transformer tweeters, made with extreme precision and state of the art cabinet quality. This makes these models very potent performers.

The Audiovector® Freedom Grounding system eliminates distortion and improves overtones, lowers the noise floor and increases image depth and focus. Freedom® Grounding is yet another step closer to perfection. Only on Arreté models.

R 1

COMPACT HIGH-END PERFORMERS

The R 1 Series delivers a speedy response with great details and dynamics. The design makes handling of percussions and bass notes easy in a clean and natural way.

These 2-way, rear-ported stand mounters, use a non-parallel tear drop design to minimize internal standing waves. Using many concepts derived from their bigger siblings, R 6 & R 3. The R 1 Series delivers a precise soundstage with nerve and punch belying their actual size. These small wonders will leave the listener wanting for more.

The Audiovector® Freedom Grounding system eliminates distortion and improves overtones, lowers the noise floor and increases image depth and focus. Freedom® Grounding is yet another step closer to perfection. Only on Arreté models.

R SUB ARRETÉ

A POWERFUL EXPERIENCE WITH SPEED AND ATTACK

The R Sub Arreté gives your audio system immediate improvements. It helps open the midrange, almost as if the system is having to do less work.

A long stroke driver, a rounded high quality cabinet, a powerful amplifier and a down firing passive radiator.

Our subwoofer delivers a fast, musical performance without stealing the attention from the loudspeakers, they support. We recommend our subwoofers for both music and movies.

The Audiovector® Freedom Grounding system eliminates distortion and improves overtones, lowers the noise floor and increases image depth and focus. Freedom® Grounding is yet another step closer to perfection.

R C

A CLEAN AND TRANSPARENT PERFORMANCE FOR THE HOME CINEMA BALANCE

Using the same principles and parts as we use in our high performance R series speakers, needless to say, these R C Center speakers deliver on point and is a fine choice for any home cinema system.

The Audiovector philosophy for optimum sound delivery is founded on synergy. To achieve the ultimate balance for your home entertainment system, each speaker must work in harmony and balance with each other.

The Audiovector® Freedom Grounding system eliminates distortion and improves overtones, lowers the noise floor and increases image depth and focus. Freedom® Grounding is yet another step closer to perfection. Only on Arreté models.

R ONWALL & R INWALL/INCEILING

A SUBTLY ELEGANT INSTALLATION LOUDSPEAKER WITH SUPERIOR MUSICAL PERFORMANCE

We approach our R-Series Inwall/Inceiling and Onwall speaker designs with the same care and attention that we do to all our R-products. These speakers deliver an impressive big and open sound based on our no-compromise philosophy concept, quality materials and fine tuning. Because they have been developed for high end music reproduction (with or without an added subwoofer) these speakers are also a great solution for a variety of situations such as office spaces, home cinema application, property projects, hospitality and office spaces and much more.

Our new wall speakers have their own specifically fine-tuned cabinets for optimum performance. In addition, the dimensions adhere to European building regulations and standards. For stereo installation, their unique midrange arrangement - which cancels unwanted wall reflections - has been designed to offer the same performance to that of a pair of freestanding speakers positioned away from the rear wall into the room.

NEW R-SERIES TECHNOLOGIES

THE R-SERIES ARRETÉ AMT TWEETER

The best we have ever made. Now sporting an Integrator Acoustic Lens, which improves dispersion, impulse response and integration with the midrange driver. In combination with our SEC treble concept, It assists to deliver a wider, deeper, higher and more natural soundstage loaded with details.

CARBON FIBER TERMINAL PLATE

On the Arreté models, the binding posts are mounted on a carbon fiber terminal plate, because carbon fiber eliminates interaction with the crossover components mounted behind it for direct connection. The result is a clearer sound.

AUDIOVECTOR CARBON DRIVERS

By using a new high-tech membrane consisting of cross woven carbon fibers sandwiched with artificial wood resin, the new membranes are the foundation of more dynamic, more detailed sound from the new R-series titanium voice coil drive units.

AUDIOVECTOR UNIQUE CONCEPTS

INDIVIDUAL UPGRADE CONCEPT

A technology which gives you the option to upgrade your speakers whenever you want. You can upgrade to a higher level or if your loudspeakers are replaced with a new improved model. This means that all Audiovector speakers are future proof.

LOW COMPRESSION CONCEPT

A technology which allows the membranes of the drivers to move freely under all kinds of demanding conditions. This means that your Audiovector speakers will stay faithful to whatever signal they are fed – no matter how loud and complicated the material.

SOUNDSTAGE ENHANCEMENT CONCEPT

This concept allows you to choose where you want to be positioned when you listen. This technology means the soundstage stays intact, wherever you are positioned. The sound fills a room in an incredible manner, giving the listener a realistic "live sound" experience.

SEC SOUNDSTAGE ENHANCEMENT CONCEPT
A technology, which makes it possible to improve dispersion, lower compression and create a huge soundstage in all three dimensions. This technology was developed by Audiovector to create a more natural and articulate performance.

FREEDOM GROUNDING®
This proprietary Audiovector® technology eliminates motional feedback distortion in the baskets of the drive units and allows for more detail, more accuracy. In short: A more authentic musical experience. A dedicated separate crossover tailors the feedback signals to perfection and route them to the ground pin in the wall or the mains distributor.

A SOLID PLINTH WITH IMPROVED AIRFLOW
All R-series speakers use a tilted plinth. This way we avoid standing waves in the cabinets and this way we have improved the elegant looks of our speakers. We have put them on high heels, so to speak. The plinths have a built-in steel spring holding the spikes in order to rid the speakers from the mass of the floor. The result is a more articulate and correct sound.

NO ENERGY STORAGE
Drive units sound best if they do not have to 'carry' the weight of the speaker cabinet to which they are fixed. This is a question of transient response. Inspired by the solutions from the Audiovector R 11 Arreté, we have managed to use the NES concept to achieve an even higher level of realism and open soundstage from our speakers.

FREEDOM® GROUNDING CONCEPT
Audiovector Freedom is a revolutionary grounding technology, which addresses the movement induced distortion of and between the drive units in a loudspeaker. The currents running between the chassis are being processed and dealt with through a new separate crossover, which routes the signal to the ground terminal of your wall socket or your grounded mains distributor.

NCS MOLECULAR REALIGNMENT
Natural Crystal Structure is one of the many invisible technological improvements of our Arreté models. By freezing components down to -238° C, the copper molecules realign themselves to their natural positions and will therefore reduce resistance. The result is a clear and more detailed sound quality.
